

Second-Hand "Tobacco Smoke" Causes Devastating Illness And Even DEATH To Non-Smokers!

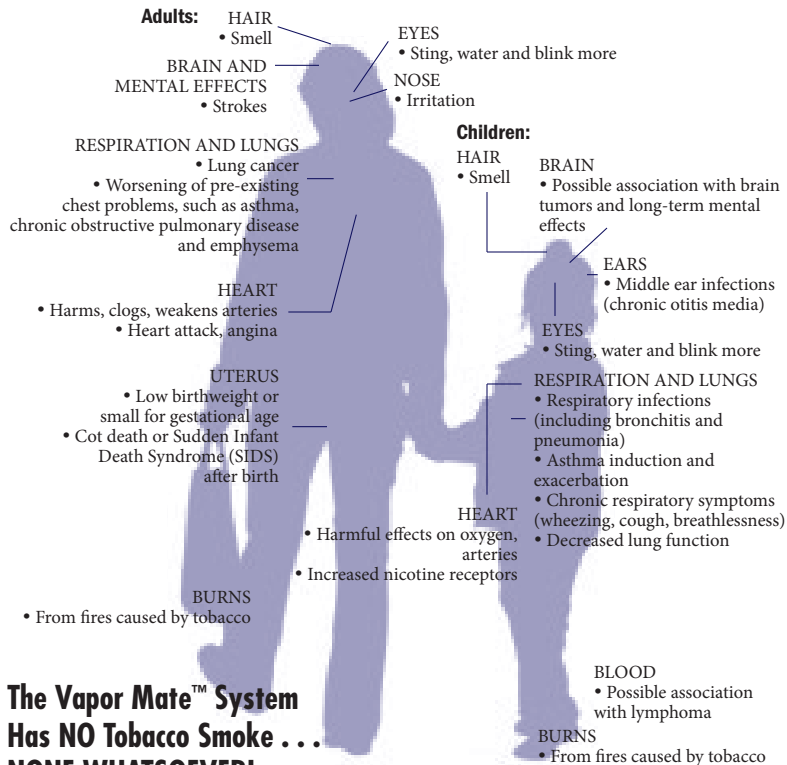

Sir Richard Doll, World's Foremost Epidemiologist of the 20th Century, stated: "An hour a day with a *smoker* is nearly a hundred times more likely to cause lung cancer in a *non-smoker* than 20 years spent in a building containing asbestos."

What The Tobacco Companies Confess To You On A Pack Of Cigarettes Is One Thing . . .

What They Fail To Tell You About Your True Probable Mortality Is Quite Another . . .

As far back as 1978 and even prior, the U.S. TOBACCO ADVISORY COUNCIL knew the consequences of tobacco when they made this outrageously callous statement . . .

“...With a general lengthening of the life expectation of life we really need something for people to DIE of...”

That “SOMETHING,” of course, is Tobacco!

Current scientific evidence is irrefutable and overwhelming:

Tobacco smoking is, at best, premeditating a person to numerous health problems, including long-term disability. At worst, it will kill you, often in a drawn-out and horrible manner. Smokers have a greatly increased risk for contracting multiple cancers, particularly CANCER of the LUNG . . . and are far more likely to watch their health deteriorate from heart disease, stroke, emphysema and many other fatal and debilitating conditions.

Chewing tobacco is *not* a viable alternative; in fact, those who chew tobacco risk severe cancers of the lip, tongue and mouth.
