

Question: Has the FDA evaluated Duplicell P199 and/or regulated its use?

Answer: No, **Duplicell P199** is *not* a drug or a drug complex and therefore is not under FDA jurisdiction. **Duplicell P199** is a 100% safe, topical cream and is available without a doctor's prescription. Because it is not a pharmaceutical drug with potential serious side effects, it does not require FDA drug testing or approval.

Note that the **Duplicell P199** formula has been precisely developed by Dr. Petrikovsky's clinical team which includes a major research and development company. **Duplicell P199** uses only the highest standardized ingredients (including the P199 peptide) and is proprietarily manufactured in a state-of-the-art production facility. No expense was spared in creating this compound. It is the result of many years of dedicated and painstaking research from some of the top scientists in the world.

Question: Can I obtain Duplicell P199 from my dermatologist or primary care physician?

Answer: No, **Duplicell P199** is not currently available through doctor's offices, dermatologists, plastic surgeons, skincare clinics or any retail outlet. It is so new that it is being offered by direct purchase only.

Please be aware that because **Duplicell P199** is so groundbreaking, there is currently limited publicity and even the most highly degreed medical professionals are largely unaware of its phenomenal anti-aging benefits. Highly advertised products such as Botox®, Restylane® and collagen injections are temporary enhancements and widely popular for physicians to administer because they have received worldwide press backed by huge budgets.

Yet you can try **Duplicell P199** Risk-Free and see extraordinary results within 2 weeks. This formula is poised to become the biggest seller of all time because it incorporates anti-aging science at its newest and most advanced technology — *stem cell therapy*. There is nothing like it, anywhere, at any price. This is why **Duplicell P199** has already been hailed as a "*Facelift Without Surgery*."

**Questions And Answers
About The Amazing
Duplicell P199 Formula
And The Anti-Aging Miracle
Of Stem Cell Multiplication . . .**

Look Up To 11 Years Younger In Just 4 Weeks...We Promise. Doctor-Developed Duplicell P199.

Question: What is Duplicell P199 and how does this specialized formula work to make my skin smooth and years younger looking?

Answer: **Duplicell P199** is a 100% safe, prescription-free topical cream developed by one of the most esteemed physicians and surgeons in the world, Dr. Boris Petrikovsky, M.D., Ph.D, Chief of Maternal-Fetal Medicine (Fetal Physiology), NY Downtown Hospital. This formulation is a brand new, revolutionary, patent-pending compound containing a proprietary blend of ingredients clinically tested to help *reduce* the look of aging skin and give your face a glamorous appearance and a supple, sexy beauty that is many years younger than your calendar age.

With the invention and release of **Duplicell P199**, anti-aging history is truly being made and the science of skincare has entered a new and uncharted frontier. The secret is in *stem cell multiplication*.

This extraordinary breakthrough is so new and so advanced that no other product sold directly anywhere in the world can legitimately claim to work the way **Duplicell P199** does, because no other formula contains the "P199" peptide — the chemical protein isolated by Dr. Petrikovsky, M.D. and shown to trigger the safe, efficient arousal and reproduction of stem cells in adult skin.

Dr. Petrikovsky's career as an in-utero surgeon (operating on babies before birth) has enabled him to witness the magnificent healing capacity of fetal skin. Without exception, examination of the surgery sight at birth has shown a complete absence of tissue scarring, with no sign of a wound surface and no abrasions to the skin whatsoever. This scientific observation led to many years of research and experimentation on stem cells and their active role in the initiation, regeneration and maintenance of smoother, firmer more youthful skin.

With increased stem cell production, skin takes on a fresh, satiny glow and texture, and demonstrates a profound reduction in the appearance of age lines and wrinkles. This is the unique process of **Duplicell P199**.

Developed By A World Famous Surgeon, Dr. Boris Petrikovsky, M.D., Ph.D

Question: Is this what Duplicell P199 does...it increases stem cell production?

Answer: Yes. And this is the key to a SEXY-SMOOTH, YEARS YOUNGER LOOKING face. The truth is, until the age of 30 or so, new stem cells are constantly being produced in great quantity in the sub-epidermal layers of your skin. Because of this continuous proliferation and migration to the surface of your skin, your face retains its dewy-fresh appearance, youthful, radiant, well-hydrated, supple, taut and smooth, firm, wrinkle-free.

However, after age 30, stem cell production begins to taper off. You start to notice a duller, lackluster finish to your skin, with less elasticity and reduced firmness. Small lines and creases appear around eyes, lips and forehead, and begin to reveal unsightly wrinkles and sags in your mirror. Your face is starting to age and lose its tone, and for the first time, you experience the unflattering reality of being robbed of your youthful glamour and sex appeal.

Fortunately, with daily application of **Duplicell P199**, the regeneration process of stem cell production begins anew. That's because **Duplicell P199** automatically and miraculously "turns on a switch" beneath your skin — the unique formulation "tells" your own stem cells to start producing again as they did in your youth. Dr. Petrikovsky's amazing discovery of the P199 peptide and its synthesis and incorporation into the **Duplicell P199** formula is at the root of this wondrous stem cell multiplication process. It is cutting-edge science, and it is a true anti-aging advancement without equal.

Question: How do I know the "P199" peptide is effectively increasing stem cell production?

Answer: The **P199** protein peptide has been shown to increase the amount of stem cell *markers* in the skin through in-vitro testing. Stem cell markers are *chemicals* associated with stem cells. Stem cell "markers" are used because you cannot just *see* stem cells by looking at the skin. An increase in stem cell markers suggests the proliferation and migration of new skin stem cells.

The three key markers **P199** has been shown to increase are Cytokeratin c-15, Cytokeratin c-19 and Beta-Integrin.

Research has shown that **P199** demonstrates an increase in Beta-Integrin, which is the protein that stem cells use to bind to particular environments within the skin. Cytokeratin c-15 and Cytokeratin c-19 are structural proteins associated with stem cells. **P199** produced a significant **350% increase** in c-15 and a **240% increase** in c-19. This is overwhelming and irrefutable evidence that **P199** is substantially increasing new stem cells.

Question: What happens if my skin has already run out of stem cells?

Answer: The good news is, this is IMPOSSIBLE. In fact, you never *lose* or run out of stem cells, and they are *not* destroyed or corrupted with age; moreover, you already have *millions* of them, yet after you advance beyond the age of 30, your stem cells start to go dormant and "hibernate." The result is the onset of ugly lines, creases and wrinkles, which perpetuate and become more pronounced over time.

This is precisely why Dr. Petrikovsky's brilliant discovery and laboratory replication of the P199 peptide is so revolutionary. No other formula available directly to you, anywhere, has this exclusive and powerful component which triggers the safe stimulation of stem cell production. Retinol does not have it. Botox® does not have it. Restylane® does not have it. In fact, nothing on the market — no other skincare compound in the world, regardless of price, exotic ingredients, or advertising publicity, has this unique P199 advantage. Any claims to the contrary are unbased and inaccurate.

Duplicell P199 is not a coverup or "filler." It is not a makeup or temporary wrinkle smoother. There are no syringes, no injections, no scapels, no corrections, no cutting and no pain. You simply apply **Duplicell P199** daily as directed, in your own home. This topical formula is invisible on your skin and can be worn under makeup or with no makeup at all.

Question: Does it matter what type of skin consistency I have or how old I am?

Answer: Absolutely not. Whether you have oily skin, dry or neutral skin — even if your face has been deeply wrinkled from the sun or compromised by environmental factors or personal habits, **Duplicell P199** will work for you. Remember, the power of this formula is in the P199 peptide, which stimulates your stem cells to start multiplying again. This is the key to turning back the aging clock, because **Duplicell P199** *really* does work from the *inside* of your face, out. Individuals from ALL age groups and all ethnicities can equally benefit from daily application of this anti-aging compound.

Question: How much younger will I realistically look with use of Duplicell P199?

Answer: This compound is so remarkable that you can expect to look up to 7 years younger in just 2 weeks and up to 11 YEARS YOUNGER in only 4 weeks. It is quite extraordinary — **Duplicell P199** works fast and with stunning visible results. You will be amazed!
